

Important notice!

When it matters most,
mammograms
may not be enough.

A recent study in the *New England Journal of Medicine* found that **mammograms failed to detect cancer in 3% of the women examined.**

"[With MRI] we are identifying cancers that would otherwise not be receiving any treatment," says Constance Lehmen, professor of radiology University of Washington.

The American Cancer Society is now recommending that women with higher breast cancer risk* add MRI screening to their usual annual breast examination.

Announcing 3T Breast MRIs

Breast cancer strikes about **200,000 women each year and kills about 40,000.**

With this greatly discounted price, we're doing our part to keep you and those you love off that list. **Call us today to schedule your Breast MRI screening.**

* PERSONS AT RISK INCLUDE THOSE RECENTLY DIAGNOSED WITH BREAST CANCER, THOSE WITH KNOWN GENETIC PREDISPOSITIONS AND/OR STRONG FAMILY HISTORIES, THOSE WITH BREAST IMPLANTS, AND THOSE WITH HIGH DENSITY BREAST TISSUE OR PROMINENT CYSTIC CHARACTERISTICS.

The choice that makes a difference.
